

Lamination and fabrication of Technical Textiles

stitch bonded multi-layer

removeable insulation covers

multi-layer laminate

reflective insulation covers

Wovens and Nonwovens can be perfectly designed for your particular application due to Culimeta's special treatment capabilities. Our treatments are developed in order to extend the life of the product while maintaining its level of performance. Typical markets are personal safety, fire protection, welding, automotive industrie, marine requirements and flexible expansion joints as well as acoustic and thermal insulation for industrial applications.

With modern bonding techniques an array of technical textiles as well as foils can be laminated three-dimensionally with up to five different layers. These multi-layer systems allow one to take advantage of the technical properties of each individual material and combine these to create a single unique product.
